

## Longer HAWEKA shaft for Summit/United wheel balancers

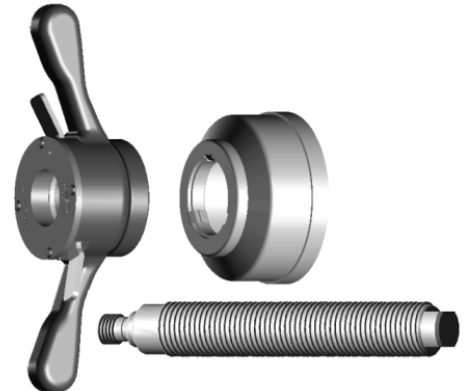

Haweke has a shaft which is longer than the OEM shaft. This assists when mounting 4x4 wheels. This adds about 30mm which allows the wing nut to be tightened.

### NOTE:

1. HAWEKA shaft has a different pitch thread so a new Quick release wing nut is required.

Part number: 124a405 003 consisting of:  
 143 405 003 ProGrip quick release wing nut  
 170 589 004 Haweka thread shaft 190mm long  
 190 008 002 Clamping hood

### Balancing 4x4 wheels

Situation where the longer shaft is required
